

PRE-LIM

Surface Cleaner

PRE-LIM is a gentle abrasive paste, for non-scratch, cleaning of metals and many other sensitive and fine-art surfaces.

Pre-Lim is widely used in the professional restoration of fire-arms, armour, sculpture, brass and copper exhibition cookware, ceramics and automotive paintwork.

Pre-Lim's formulation is based on blended Neuburg silica chinks in a water/white spirit emulsion. In normal use Pre-Lim is not a health hazard.

Pre-Lim's cleaning / burnishing action is achieved with extremely fine control using a soft rag and light pressure. After a few minutes of air-drying, the residual chalky deposit is easily rubbed away with a clean rag, leaving surfaces dry and silky-smooth.

To ensure that cleaned surfaces, especially metals, remain clean and bright, protect them with a coat of the Glass - Clear RENAISSANCE Microcrystalline WAX-POLISH for a long-lasting and visually enhanced finish.

When stored in its air-tight container at room temperature or colder, Pre-Lim has an excellent shelf life.

Test First ---

As is customary in professional restoration, a discreet test is advised to ensure that Pre-Lim cleaner is suitable for your specific project.
